

Why is Pro Active Rubber Sealant the best?

This sealant is quite literally a liquid rubber, it is easy to handle and can be applied like any regular paint to many common surfaces to make them waterproof and give them extra protection. Due to the amazing adhesion to almost any substrate it has become the most universal sealer. The way it works is, it forms a tough, durable and waterproof barrier that adheres tightly to the surface and remains a flexible seamless membrane which protects against leaks, UV rays, salt spray, thermal cycling and harmful chemicals all while it resists cracking and aging. It can also assist you in applying tiles as it can act as a glue adhesive.

1L of sealant covers: 1-2m² for 2 coats, allow 0.5L/sqm for concrete or rough surfaces.

4L of sealant covers: 4-8m² for 2 coats, allow 0.5L/sqm for concrete or rough surfaces.

10L of sealant covers: 10-20m² for 2 coats, allow 0.5L/sqm for concrete or rough surfaces.

20L of sealant covers: 20-30m² for 2 coats, allow 0.5L/sqm for concrete or rough surfaces.
